Summary

Frontend Developer building scalable web apps with Next.js, React, and Tailwind CSS. Experienced in optimizing high-traffic SEO pages, AI-powered dashboards, and full-stack systems with Go APIs. Published IEEE researcher in ML. Passionate about performance, ownership, and user-centric platforms.

Experience

Software Developer – Frontend, Collegedunia Web Pvt. Ltd. – Gurugram July 2025 – Present

- Increased user engagement by 20% on Prepp.in by redesigning the SSC Exams module UI with Next.js, improving discoverability across 500+ government exam test series for 50k+ monthly users.
- Improved Core Web Vitals by reducing page load time 30% for high-traffic SEO exam pages through Next.js SSR implementation and automated image optimization.
- Engineered Razorpay autopay integration on Prepp+, launching a 3-day trial at 1 alongside monthly/yearly plans — directly expanding the subscription funnel and boosting revenue.
- Launched new UPSC mentorship courses on Prepp IAS, building dynamic course listing and enrollment pages with lead capture modules to drive student registrations.
- Built **DotContext** (dotcontext.ai) client dashboard from scratch — a context-aware YouTube ad targeting platform; engineered campaign management, 6-stage AI pipeline monitoring (video fetching → metadata → audio transcription → view-velocity → final ranking), real-time status tracking, dynamic filtering, and CSV export — helping brands identify 1000+ brand-safe, high-relevance videos per campaign.

Software Engineer Intern, Bobble AI – Gurugram May 2024 – May 2025

- Reduced developer debugging time by ~25% by engineering a cross-platform Firebase Debug Events Dashboard to visualize real-time Android and iOS logs.
- Created a Sticker Validation Dashboard in Next.js to streamline review workflows for 10,000+ sticker assets, reducing manual annotation overhead for content teams.
- Reduced sticker retrieval latency by 15% by architecting a Go-based REST API using Clean Architecture, GORM, and optimized SQL queries, containerized with Docker.
- Added unit tests and automated deployment with GitLab CI/CD for seamless builds and continuous integration.

Full Stack Developer Intern, Hatchnhack Solutions Pvt Ltd – Delhi July 2023 – Sep 2023

- Built a full-stack restaurant management system for an Australian client, handling online orders, reservations, and table allocation for 100+ daily transactions.
- Implemented role-based admin dashboard for order tracking, reservation management, and table allocation.

Technologies

Languages: JavaScript, TypeScript, Python, Go **Frontend:** React.js, Next.js, Tailwind CSS, Redux

Backend: Go (Gin, GORM), Node.js **AI/ML:** TensorFlow, Scikit-Learn, Flask, Gemini API

Databases: PostgreSQL, Supabase **Tools:** GitLab CI/CD, Docker, Firebase, Razorpay

Education

Chandigarh University, BE in Computer Science (*Specialization: AI/ML*) Aug 2021 – May 2025

Projects

Brainstreamliner – Mental Health & Psychology Training Website Project link

- Developed a professional website for a clinical psychologist using React.js and Tailwind CSS, boosting credibility and client outreach with intuitive navigation and mobile-responsive design.

Medical Diagnosis System – AI-Based Disease Prediction Project link

- Achieved 90% prediction accuracy by engineering a Random Forest model using Scikit-Learn and TensorFlow, deploying the system via a Flask REST API.

E-Commerce Platform: Four Five 7 Project link

- Built a full-featured e-commerce platform using Next.js, TypeScript, Supabase, and PostgreSQL, featuring an admin dashboard for product management and order tracking, Stripe payment integration, and JWT-based authentication.
